Accounts ? Add & Import

Once the basics are created, it is the time to import your accounts in a batch file or add them at any time. SmartBilling allows you to Import and process the data as per the field configuration you did previously or as trial an error. The content of the tables is created while the errors are solved. The system is intuitive and tells you the reason why certain data is not processed from the batch file. You just need to follow the instructions and correct the error in the configuration set above.
